interWORKS *solutions for*

Hospitals

Is Your Imaging Solution Keeping Pace with Your Growth?

Recent industry trends show that imaging volume managed by hospitals and hospital owned outpatient imaging is growing. Yet, hospitals fail to harness the imaging revenue growth potential of this trend due to poor, disconnected workflow and a lack of integrated information access.

As hospitals acquire ambulatory imaging, many find that their radiology software solutions do not offer the flexibility to manage radiology workflow and image access effectively beyond the immediate hospital enterprise. Smart hospital systems can counter this trend by adopting a WAN optimized PACS solution that effectively manages outpatient imaging workflow and provides access to radiology images and content from one system throughout their hospital enterprise.

EHR *for Radiology*
because RIS/PACS is not enough

What Do I Need to Know?

Can interWORKS make imaging studies, reports, and related content available over your Wide Area Network?

Yes. The WAN optimized, web-based connectivity within interWORKS ensures that radiologists, administrators, technologists, and healthcare professionals can securely and efficiently perform workflow driven tasks and access needed information regardless of location.

Can interWORKS manage our ambulatory imaging workflow for our hospital enterprise?

Yes. interWORKS can act as a layer on top of your existing enterprise PACS to support your entire ambulatory imaging network without modifying your hospital-based enterprise PACS workflow. In addition, interWORKS can also replace your enterprise PACS based on your organization's needs.

How do the RIS capabilities in interWORKS function with my existing systems?

To maximize workflow efficiency, interWORKS can receive orders from your EHR system via HL7. Our visual DayPlanner then displays these orders to help technologists manage their schedule within a single application.

Does interWORKS meet the Image Results requirements of Stage 2?

Yes. interWORKS version 7 has achieved ONC HIT 2014 Edition complete Inpatient and Ambulatory EHR certification, which maximizes communication, security, and compatibility with your hospital's enterprise EHR.

interWORKS *solutions for*

Hospitals

Recommended Configuration

- interWORKS

- interWORKS VM hosted in your organization's data center. This option requires Avreo approved VMWare or HyperV virtual guest on your organization's hardware.
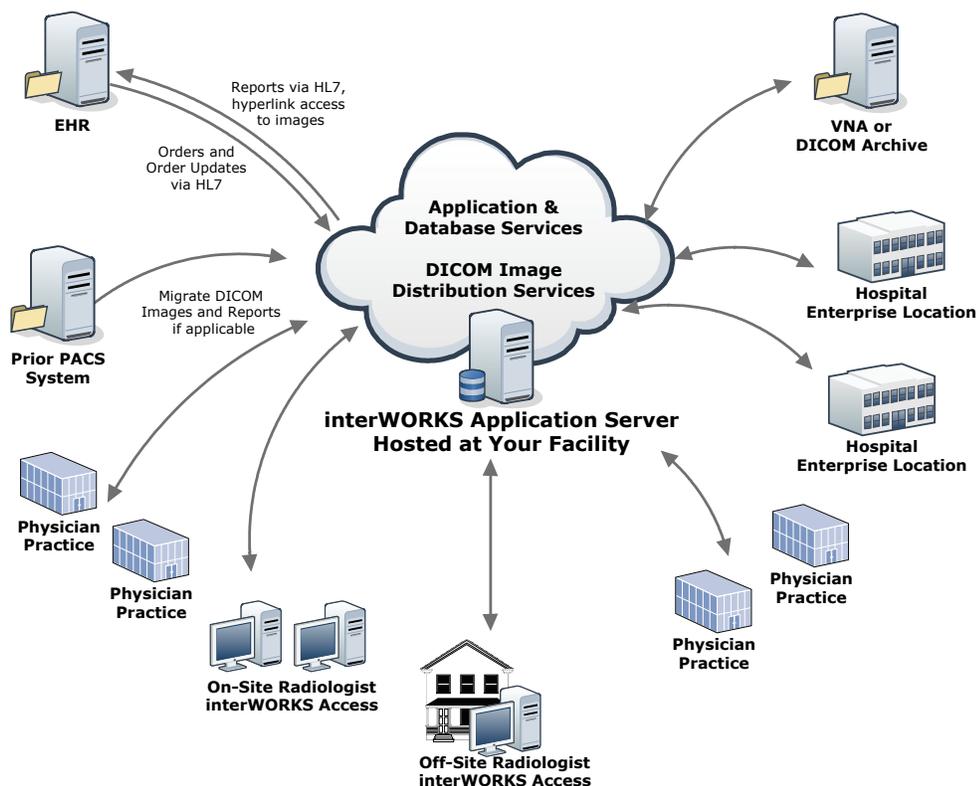

- SLS licensing

Why interWORKS?

- WAN optimized, web-based image and reporting access to ensure all healthcare professionals can do their job regardless of location and provides a pathway to include imaging information in enterprise HIS/EHR.

- Strategically manages imaging workflow for all ambulatory imaging offices through one system.

- Accepts radiology orders from your enterprise HIS/EHR to minimize impact on scheduling workflow.

- Standards-based support for not only DICOM and HL7, but also for the emerging standards mandated by Meaningful Use.

- Unifies workflow processes throughout your radiology workflow, while eliminating duplicate processes in many integrated solutions.

Proven Quality Over Time

- Avreo named KLAS Category Leader in Both PACS (Community) and Radiology (Community) Segments for 2013 in the "Best in KLAS 2013: Software & Services" report.

- Since 2008, Avreo has been named KLAS Category Leader in PACS/ Radiology 6 times.
